

Care & Cleaning - **Monocoat**

Daily Cleaning

To clean your countertop we recommend using soap and water.

Maintenance

Use Monocoat Refresh aerosol spray when the surface looks or feels too dry or rough, or when the finish has worn off due to heavy traffic. To order go to www.monocoat.us/Refresh/

What Not To Do

Do not apply wax of any kind to the top.

Do not scrub with harsh products like Comet or Scotch Bright pads.

Do not set hot pan directly on the surface. Be careful taking lids off cooking pots and setting them on the surface. The hot steam can damage the finish.

Do not place or use harsh chemicals on the surface.

Do not use steel wool on the surface. Small pieces can get into the pores and rust.

Use common sense when cutting on the surface. If you purchased the countertop as a food preparation area then use it as one with no fear of cut marks. If you did not purchase it for food preparation you may not want to chop directly on the surface as it will leave marks.

Now that you're up to speed on your new wood countertop sit back and relax, your new kitchen or bathroom is probably just about done. Enjoy, you deserve it.

It is recommended that a humidifier be used to increase humidity levels in the space where this countertop lives. For best results a humidity level of approximately 50-55% should be maintained.

Please note that areas with naturally dry air like Arizona or climates that use extensive amounts of dry heated air like Wisconsin in the winter should take extra care.
